Arithematic operations

```python
num1=float(input())
num2=float(input())
sum=num1+num2
diff= num1-num2
product=num1*num2
div=num1/num2
quo=num1//num2
print(sum,diff,product,div,quo)
```

Type Casting

```python
str1="78.562"
int1=int(float(str1))
print(int1)
float1=float(str1)
print(float1)
```
